

Iranian Petroleum Standards is among the most frequently used documents which is available to the engineers of this field. Regarding the nature of this document (PDF format) searching is time consuming and often boring. Using this application, one can search a word or a sentence in all IPS documents and see the result as text. Also a part of that text could be saved so that it can be used in meetings easily.

IPS standard includes the minimum requirements for engineering, manufacturing and installation materials in the refining, oil, gas and petrochemical industry and its main target is to achieve the desired amount of discipline and quality in a particular field and in general follow the below mentioned approach:

- Integration
- Minimum requirements
- Avoiding duplication
- Saving time and costs
- Precious, speed, accuracy

Updating this standard with regard to the development of new technologies and new experiences is essential. Therefore, the company's engineering team continuous participating in meetings in order to update the IPS standard and adapt its content to the internal situation of the country with executive experience in projects carried out in the company as well as the use of international resources.
