Splan

Splan is a visitor management platform that can be deployed in the cloud or on-premise. Designed for easy deployment in various industries, it gives businesses a reliable solution to manage their visitor registrations and check-in without requiring them to acquire and install additional hardware or software.

With Splan, companies of any size and type find it easy to control and manage visitor influx, access, and movement through simplified visitor badging. Security for people and facilities is greatly improved while expenses are significantly minimized. Aside from visitor registration, Splan features and functionalities include self-service kiosks for check-in/out, email and SMS notifications, dashboard, reporting tools, and event management tools to name a few.

Overview of Splan Benefits

Splan visitor management software bolsters the security of your facilities, workplace, employees, and more with a highly reliable and advanced visitor management solution. You can pre-register your visitors, scan driver's licenses, create visitor badges with access controls, and more with Splan.

When you expect someone coming to your office, Splan helps you pre-register your visitors to make their visit smooth, seamless, and totally secure. Splan can take their details through the online web interface or mobile app and once they are registered, the software automatically performs a background check and run their data against a variety of watch lists or identity databases.

You are instantly informed if a visitor has hit a snag during the background check process, such as being in an offender's list or unwanted persons, enabling you to proceed with caution or cancel the appointment then and there.

Whenever your visitors sign in or check out, Splan sends you a notification through SMS, email, or phone call. You will know when they arrive or leave the premises.

First-time visitors no longer have to manually write down their details on a paper-based form as Splan offers a self-service kiosk built with a driver's license scanner. It scans and captures all the information found in the license and runs them against federal agencies listings, watchlists, and third-party databases to verify the accuracy of the information as well as perform an immediate background check. Works on passports too.

Reporting tools and analytics provide you with valuable, actionable insights to further improve your visitor management processes, making you more efficient and effective when handling your visitors, escorts, vendors, and more.
