

EVALUATION BOARD 8051

With this **board** you can develop and prototype with any of **8051** 40 pin microcontrollers. The RS232 driver on **board** allows easy connection with PC. With this **board** you can develop and prototype with any of **8051** 40 pin microcontrollers. The RS232 driver on **board** allows easy connection with PC. This is a high quality **8051** development **board**. Perfect if you are just starting out in programming **8051** or if you want a reliable **board** to build advanced projects. **8051-Ready board** is a prototype **board** with pin headers for 44-, 40- and 20-pin **8051** microcontrollers from Atmel. Development **Board** for Atmel **8051** MCUs. Features USB 2.0 programmer. **8051** Microcontroller Development **Board**: Its originality is worth and used up for basic and advanced level projects.
