

Fresnel Lens SB-F-03

SB-F-03

PROD Model:SB-F-03

Material : HDPE

Overall Size:Grain diameter 23mm(ϕ 26*17mm)

Focal Length:11.5mm

Detectable Distance: \geq 10m

Viewing Angle:120°

Color : primary color 、 black、 milky(Color customization is acceptable)

Overview

Widely used in human body induction switch, alarm, infrared thermometer and infrared imaging and other aspects. Can provide users with different induction Angle, induction distance, size, test ratio. Fresnel lens action: one is focusing action; Second, the detection area is divided into a number of bright areas and dark areas, so that the moving objects entering the detection area can generate changes in the form of temperature changes on the PIR(passive infrared detector).

Feature

- ★ Downlight
- ★ Ceiling light
- ★ Yard light

Datasheet
