

5V-12V DC Brushless Motor Driver 3/4 Wire

The driver board can drive hard disk brushless motors, CD-ROM brushless motors and other micro brushless motor of line 3 or 4 wires without hall sensor.. It has the reverse voltage protection, over current protection to ensure the usage safety. The driver voltage 5-12V , the higher the voltage the faster the speed, the maximum speed up to 10,000rpm.

- Drive voltage: DC 5-12V
- Work current: $\leq 1.2A$
- Speed range: from 0% to 100%
- Phase inversion Control: Yes
- Voltage polarity protection: Yes
- Overcurrent Protection: Yes
