Linear Division Interface Products

### Description

The μA96173 and μA96175 are high speed quad differential line receivers designed to meet EIA Standard RS-485. The devices have three-state outputs and are optimized for balanced multipoint data bus transmission at rates up to 10 Mbps. The receivers feature high input impedance, input hysteresis for increased noise immunity, and input sensitivity of 200 mV over a common mode input voltage range of -12 V to +12 V. The receivers are therefore suitable for multipoint applications in noisy environments. The μA96173 features an active high and active low Enable, common to all four receivers. The μA96175 features separate active high Enables for each receiver pair. Compatible RS-485 drivers, transceivers, and repeaters are also offered by Fairchild and are designed to provide optimum bus performance. The respective device types are μA96172/96174, μA96176 and μA96177/96178.
