# 1 CHANNEL 8-BIT VIDEO A/D CONVERTER

## MB40578

### ■ DESCRIPTION

The Fujitsu MB40578 is a low power ultra-high speed video A/D converter fabricated with Fujitsu Advanced Bipolar Technology. The MB40578 also adopts the fully-parallel comparison technique (flash method) for high speed conversion and can convert wide band analog signal such as video signal to digital signal at a sampling rate of DC through 20 Mega-samples/sec. Because of such high-speed operation, the MB40578 is suitable for digital video applications such as the digital TV, video processing with computer, or radar signal processing.
