The "Drives Soft2" configuration software is an efficient tool for handling the entire range of DF6 and DV6 parameters.

Main features:

- A tree structure: all parameters in a clearly arranged overview

- Application-specific window: parameters can be combined on an individual basis to suit requirements

- Online device control: direct control of the frequency inverter

- Comparator function: provides an immediate overview of the altered parameter settings

- Monitoring function: graphically displays the trend of the most important drive data, e.g. for drive and process automation
