

Megawin Technology was formed by a group of IC design and sale specialists in 1999. Our company's mission is to become the worldwide MCU supplier through nonstop research & development and patent portfolio plan. One of our company's slogan is: "Be Practical and Be Creative". We believe that in order to become the qualified worldwide MCU supplier, we would have to constantly and continuously develop innovative products.

Megawin Technology Co., Ltd. is located at the Taiyuan Science Park, and primarily focuses on MCU design and sale.

Our company was formed by a group of intellectual MCU software/hardware platform specialists, and we provide full services in every MCU field. For our IC product line, we believe that we have to supply qualify firmware solutions to our customers. We are also continuously building firmware tool kits for our customers.

For IC operating conditions, we target higher immunities, wider operation voltages, and larger operation temperature ranges. We are adding more analog modules to IC to conveniently capture natural signals, and also to build more serial interfaces to convert to digital signals. Another major aim

is to lower the MCU power consumption in the embedded platform.

For firmware tool kits, we provide complete development solution tools such as ICE, Writer, and ISP Programmer, and we partner with well-known companies such as Hi/Lo, Leap and Labtool to service the Writer. Megawin constantly pursues to perfect the ICE Emulation environment for customers to develop their firmware.

Conflict-Free Metals

MEGAWIN takes very serious the allegations that metals mined in the Democratic Republic of the Congo may be making their way into the electronics supply chain; and profits from this illegal mining may be fueling human rights atrocities in the Eastern Region of the DRC. However, due to the complexities of the metals supply chain, we are currently unable to verify the origin for all metals used in our products.

Commit

MEGAWIN would like to express the expectation to our suppliers to assure that the metals are not being sourced from mines in conflict areas and continuous monitoring activities of direct supply chains to avoid procurement of Conflict Metals.
