Fast Shipping: We shipping Dell 9T119 battery the same day, and you can choose two shipping ways. The faster way will only take 2-5 days Worldwide. Please leave a recipient's phone number for Secure delivery at first.

Good Tips For Getting Maximum Shelf Life For Your Dell 9T119 Battery:

Your new laptop battery comes in a discharged condition and must be charged before use (refer to your computer manual for charging instructions). Upon initial use (or after a prolonged storage period) the battery may require two to three charge/discharge cycles before achieving maximum capacity.

When charging laptop battery for the first time your computer may indicate that charging is complete after just 10 or 15 minutes. This is a normal phenomenon with rechargeable batteries. Simply remove the Dell 9T119 battery from the computer and repeat the charging procedure.

It is important to condition (fully discharge and then fully charge) laptop battery every two to three weeks. Failure to do so may significantly shorten the battery's life (this does not apply to Li-Ion laptop batteries, which do not require conditioning). To discharge, simply run your device under the battery's power until it shuts down or until you get a low battery warning. Then recharge the battery as instructed in your user's manual.

If laptop battery will not be in use for a month or longer, it is recommended that it be removed from the device and stored in a cool, dry, clean place. It is normal for replacement laptop battery to become warm during charging and discharging.

A charged laptop battery replacement will eventually lose its charge if unused. It may therefore be necessary to recharge the battery after a storage period.
